

KARTHICKRAJA K

FULL STACK DEVELOPER

karthickr2304@gmail.com | [+91 6369831841](tel:+916369831841) | linkedin.com/in/karthickraja-k23 | github.com/KARTHICK2320

PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience across the web application lifecycle — RESTful API design, relational database integration (MySQL), and production React.js frontends. Independently built and shipped a full inventory management system (React.js, Flask, MySQL) with JWT authentication and CRUD-based API endpoints. Proficient in Python, JavaScript (ES6+), and SQL, with a working foundation in Java. Oracle Cloud Infrastructure certified, security-conscious, and comfortable operating in a client-facing, cross-functional engineering team.

CORE COMPETENCIES

- Languages: JavaScript (ES6+), Python, Java (NPTEL Certified), SQL
- Web & Frameworks: React.js, Flask (Basics), HTML5, CSS3, RESTful API Design, Component-Based Architecture
- Data & Cloud: MySQL (schema design, relational queries, CRUD operations), Oracle Cloud Infrastructure (certified)
- Practices & Tools: JWT Authentication, Middleware, Error Handling, Git, GitHub, VS Code, Agile-adjacent team workflows

PROFESSIONAL EXPERIENCE

Frontend Developer Intern | Pargavan Cyber Solutions, Coimbatore

2025 – 2026

- Architected the frontend for GIMS, a full inventory management system, using React.js and JavaScript (ES6+) across Dashboard, Inventory, Alerts, and Reports modules.
- Built reusable React components with state managed via Hooks and Context API, consolidating repeated UI patterns into shared components to cut duplicated code.
- Integrated REST APIs for live stock data flow between frontend and backend; implemented input sanitisation and XSS-safe form validation, applying security best practices to production data.
- Built the React frontend for Track My Customer (CRM module) with JWT-authenticated flows, collaborating with backend engineers on Flask API integration for add/edit workflows and automated low-stock alert triggers.

KEY PROJECTS

GIMS — Generic Inventory Management System

2026

React.js, Flask (Python), JWT, MySQL, REST APIs, Vite

- Independently built a full-stack application end-to-end: React/Vite frontend backed by a Flask REST API with JWT authentication and middleware for request handling and centralised error handling.
- Designed REST API endpoints integrated with MySQL, covering CRUD, search, and department-filtering workflows — mirroring RDBMS-based data integration used in client-facing systems.
- Implemented role-based access flows and automated low-stock threshold alerts; structured the backend into modular components to support planned expansion (reporting, analytics, multi-user permissions).

Track My Customer — CRM Module

2025 – 2026

- Developed a customer management module with a Tailwind-styled, responsive UI, status tracking, and automated alert triggers integrated with backend APIs.
- Collaborated with the backend team on the Python/Flask API for the module, contributing to endpoint logic behind status tracking and automated alert triggers alongside frontend integration.

EDUCATION

Bachelor of Engineering, Computer Science and Engineering

RVS College of Engineering and Technology, Coimbatore | 2022 – 2026 | CGPA: 7.64/10

Higher Secondary — N S Boys Higher Secondary School

Percentage: 71.17%

CERTIFICATIONS

- Cloud Infrastructure — Oracle University, 2024
- UI Developer Certification — Infosys Springboard, 2025
- Programming in Java — NPTEL, 2024
- Python Programming — IPCS Automation, 2024
